

Packer Rebuild Kits

Update to state-of-the-art technology – today!

- Convert out-dated clutch & brake systems of your auger fillers to **servo-drive technology**, for most accurate & precise filler operation and low maintenance.
- Upgrade your shrink bundler with a **continuously heated welding bar**. This update ensures simple and precise operation, e.g. when matching the heating parameters to the shrink film quality.

Additional advantages offered by FAWEMA's rebuild kits:

- replacement of outdated mechanical and electrical components that may no longer be available
- shorter downtime requirements for scheduled maintenance
- large FAWEMA inventory of replacement parts, with available 24-hour shipping service
- improved production uptime due to excellent availability of critical components
- FAWEMA guarantees replacement parts availability for a minimum of 10 years from purchase
